

HANTHARMINTUN

FULL STACK WEB DEVELOPER | SOFTWARE ENGINEER

📍 Magway Region, Myanmar (Remote Available) | 📞 +95-9760516745 | ✉️ hhaann13579@gmail.com |
🔗 github.com/HanTharMinTun

PROFESSIONAL SUMMARY

Software Engineer specializing in **full-stack web development**, backend system architecture, and Linux server administration. Proven competence in creating dynamic, database-driven systems using **PHP** and **Python** alongside robust **MySQL** optimization. Adept at managing infrastructure configurations, continuous integration, and custom automation scripting. Highly analytical problem-solver capable of operating independently to deliver clean, scalable, and optimized code solutions in remote software environments.

CORE SKILLS

Web & Frontend	HTML5, CSS3, JavaScript (ES6+), UI/UX Component Implementation
Backend & Scripting	PHP, Python (Automation & Backend Logic), C# Programming
Databases & Infrastructure	MySQL (Schema Design & Optimization), Linux Server Management, Basic Networking
Tools & Frameworks	Git, GitHub, Bash Scripting, Unity Engine, Postman, Linux Environment Deployment

PROFESSIONAL EXPERIENCE

System Administrator (*Freelance*) May 2023 – Present

- Configure and manage secure **Linux-based production environments**, completing scheduled maintenance updates and kernel system parameter optimizations.
- Implement fine-grained Access Control Lists (ACLs), user workspace configurations, and robust server firewall policies.
- Facilitate the deployment pipeline of client-facing web applications, executing comprehensive backend diagnostics to minimize downtime.

PHP Developer (*Part-Time*) Apr 2024 – Nov 2024

- Architected and refactored core backend functionalities for responsive, dynamic **PHP web applications**.
- Designed normalization strategies and managed relation models within **MySQL database structures** to improve query response metrics.
- Implemented complex authentication, session states, and custom API validation logic blocks.

Unity Game Developer (*Self-Employed*) Mar 2021 – Feb 2024

- Engineered extensible game systems and multi-threaded script assemblies utilizing **C#** and the **Unity Engine**.
- Built modular state machines for high-performance interactive gameplay loops and canvas-driven UI components.

Python Developer (*Self-Employed*) Mar 2022 – Jun 2022

- Created highly optimized system utilities and backend data scraping/processing scripts written in pure **Python**.
- Streamlined filesystem operations, standardized error handling blocks, and mitigated application resource leaks.

PROJECTS

- **Full Stack PHP Web Applications:** Authored scalable CRUD logic systems integrating explicit password hashing mechanisms, user session tracking, and direct relational MySQL schemas.
- **Linux Server Setup & Deployments:** Orchestrated standalone web stacks including server configuration parameters, secure domain bindings, and reverse-proxy assignments.
- **Python Automation Tools:** Engineered standalone custom scripts to execute transactional system diagnostics and automated local file processing tasks.

EDUCATION

Bachelor of Computer Science *(In Progress)*

Expected 2027

University of Computer Studies, Magway

Focus Areas: Software Engineering, Web Development, Databases, Relational Models, Linux Core Architectures
