PROFESSIONAL SUMMARY

Computer Science undergraduate with a definitive focus on **cybersecurity** and **web application security testing**. Experienced in Python, PHP, and backend fundamentals with strong hands-on validation of **OWASP Top 10 vulnerabilities** and secure programming architectures. Proficient in identifying security flows, inspecting infrastructure flaws, and deploying modern offensive/defensive methodologies within highly structured testing environments.

TECHNICAL SKILLS

Security & Concepts	OWASP Top 10, SQL Injection (SQLi), XSS, CSRF, File Upload Flaws, Remote Code Execution (RCE)
Recon & Security Tools	Burp Suite, CyberChef, FFUF, Gobuster, DirBuster, msfconsole, nslookup, waybackurls
Languages & Frameworks	Python, JavaScript, PHP, SQL, Java, C#
Automation & Core	Selenium, Playwright, Linux, Git, GitHub, Postman, PostgreSQL, MySQL

CYBERSECURITY & PRACTICAL EXPERIENCE

Web Application Security Testing	Lab Environment
- Executed detailed vulnerability mapping and security assessments on target environments including OWASP Juice Shop and DVWA. - Identified, simulated, and documented high-severity compromise flows involving malicious File Upload bypasses and Remote Code Execution (RCE) vectors. - Evaluated full-chain exploitation mechanics to construct actionable, professional security remediation reports.	
API & Web Security Projects	Independent Research
- Developed custom, multi-threaded Python automation engines to scale localized target enumeration and web application component structural checks. - Audited complex server-side behaviors focusing on authentication validation, session token entropy, and cookies persistence. - Investigated edge-case mitigation controls involving custom rate-limiting rulesets and fingerprint-based bot-detection mechanics.	
Browser Automation & Web Flow Analysis	Security Automation
- Engineered stateful web scenarios utilizing Selenium and Playwright to evaluate multi-session behavior and concurrency-driven context leaks. - Deconstructed asynchronous web workflows and intercepted API payloads by debugging client-side JavaScript layers with advanced browser inspection configurations. - Mapped explicit client-to-server data state machines to detect logic flaws and unauthorized horizontal privilege escalations.	

EDUCATION

Bachelor of Computer ScienceExpected 2027

University of Computer Studies, Magway

INTERESTS & CORE ATTRIBUTES

Focused Specializations: Web Application Penetration Testing • API & Microservice Authentication Security • Secure Software Development Lifecycle (SSDLC) • Emerging AI/LLM Vulnerability Research

Soft Skills: Analytical Reasoning, Root Cause Analysis, Professional Technical Documentation, Self-Directed Technical Mastery, Iterative Team Collaboration
